

ABSTRACT

THIS IS A REPORT OF CULTURAL RESOURCE SURVEY at Wagamon's Mill Pond, Milton, Sussex County, Delaware. The owner, the Delaware Department of Natural Resources and Environmental Control, has obtained the assistance of the Delaware Department of Transportation for a project to renew the dam and build a new roadway over it.

The combination waste gate and bridge structure was found to be eligible for inclusion in the National Register. The mill site, dam, and other features of the hydraulic system, are not eligible.

Archæological survey consisted of a total of ten machine-cut trenches through the mill site, revealing evidence for the location of the most recent mill. Much of the site has been dug away as a borrow pit, obliterating any earlier elements, such as prehistoric sites, that might have existed.

A photographic record of the existing features was prepared for the Historic American Engineering Record.
